Problems of Existing Image Captioning

This project is based on the [BLIP](#) and [SMILE](#) repositories. It fine-tunes an image captioning model using the Flickr8k dataset and provides a demo through Streamlit.

Existing MLE(Maximum Likelihood Estimation) **based models** produce **overly generic and simple captions**.

Table of Contents

1. [Project Modifications](#)
2. [Flickr8k Dataset Download and Fine-tuning Process](#)
3. [Running the Demo with Streamlit](#)

1. Project Modifications

The following changes were made from the [original GitHub repository](#):

- **Dataset Support:** Replaced the COCO dataset with the Flickr8k dataset.
- **Configuration File Updates:** Added the `configs/captioning.yaml` file to support fine-tuning with the Flickr8k dataset.
- **Custom Data Loader:** Added the `data/flickr8k_dataset.py` file to support fine-tuning with the Flickr8k dataset.
- **Evaluation Function Modifications:** Adjusted evaluation methods for the Flickr8k dataset.
- **Fine-tuning Script Modifications:** Updated `train_captioning.py` to support fine-tuning with the Flickr8k dataset.
- **Streamlit Demo:** Added the `app.py` file to provide an interactive demo.

MLE-based models

A woman holding a cake with lit candles

2. Flickr8k Dataset Download and Fine-tuning Process

SMILE (Semipermeable Maximum Likelihood Estimation)

This project is based on the [BLIP](#) and [SMILE](#) repositories. It fine-tunes an image captioning model using the Flickr8k dataset and provides a demo through Streamlit.

SMILE based models can produce **richer context** than existing image captioning models.

Table of Contents

Human

A woman holding a birthday cake with lit candles

MLE-based models

A woman holding a cake with lit candles

Optimization Conflicts

Richness Optimization

Conciseness Optimization

SMILE

A pretty young lady that has some kind of white frosted birthday cake with lots of lit candles on top of it, surrounded by several other people looking onwardly at something in the distance.

SMILE (Semipermeable Maximum Likelihood Estimation)

This project is based on the [BLIP](#) and [SMILE](#) repositories. It fine-tunes an image captioning model using the Flickr8k dataset and provides a demo through Streamlit.

Table of Contents

1. [Project Modifications](#)
2. [Flickr8k Dataset Download and Fine-tuning Process](#)
3. [Running the Demo with Streamlit](#)

Key Ideas

- **Preserve Richness Optimization**
- **Block Conciseness Optimization** [sub repositories](#)
 - **Dataset Support:** Replaced the COCO dataset with the Flickr8k dataset.
 - **Configuration File Updates:** Added the `configs/caption_flickr8k.yaml` file for configurations tailored to the Flickr8k dataset.
 - **Custom Data Loader:** Added the `data/flickr8k_dataset.py` file to handle the Flickr8k dataset.
 - **Evaluation Function Modifications:** Adjusted evaluation methods for the Flickr8k dataset.
 - **Fine-tuning Script Modifications:** Updated `train_caption.py` to support fine-tuning with the Flickr8k dataset.
 - **Streamlit Demo:** Added the `app.py` file to provide an image captioning demo using the trained model.

2. Flickr8k Dataset Download and Fine-tuning Process

How It Works

- During training, the model **predicts within a subset of the vocabulary**
- **Penalizes concise predictions** while allowing richer descriptions.

- **Streamlit Demo**: Added the `app.py` file to provide an image captioning demo.

Results

Method	Semantic		Linguistic	
	Descrip.	Acc.	F1	Flu.
CapEnrich	3.89	4.39	4.12	4.36
BLIP	3.41	4.57	3.91	4.91
BLIP- $\mathcal{L}_{\text{SMILE}}$	4.67	4.05	4.34	4.75
Human	3.53	4.53	3.97	4.87

Row	Basic Model	Further Training	Caption Length	Lexical Diveristy	Self-Retrieval		CLIPScore	PPL
					R@1	R@5		
1	FS	-	9.6	0.6	1.9	6.3	73.9	56.2
2		$\mathcal{L}_{\text{SMILE}}$	15.4	0.7	0.7	2.5	63.7	86.7
3	PT	-	5.8	1.0	2.7	8.6	74.6	573.4
4		$\mathcal{L}_{\text{SMILE}}$	22.5	4.9	8.5	20.1	73.5	113.7
5	PT+FT	-	10.0	1.4	6.7	16.6	77.2	95.8
6		\mathcal{L}_{MLE}	10.0	1.4	6.5	16.6	77.2	67.6
7		$\mathcal{L}_{\text{SMILE}}$	22.3	4.5	10.0	24.5	75.0	95.6

Paper Summary

This project is based on the [BLIP](#) and [SMILE](#) repositories. It fine-tunes an image captioning model using the Flickr8k dataset and provides a demo through Streamlit.

Conclusions

- Addresses the shortcomings of MLE by guiding models to produce richer, more detailed captions.
- Simple and compatible with existing models

1. Project Modifications

The following changes were made from the [original GitHub repositories](#):

- **Dataset Replacement:** Replaced the COCO dataset with the Flickr8k dataset.
- **Configuration File Updates:** Added the `configs/caption_flickr8k.yaml` file for configurations tailored to the Flickr8k dataset.
- **Custom Data Loader:** Added the `data/flickr8k_dataset.py` file to handle the Flickr8k dataset.
- **Evaluation Function Modifications:** Adjusted evaluation methods for the Flickr8k dataset.
- **Fine-tuning Script Modifications:** Updated `train_caption.py` to support fine-tuning with the Flickr8k dataset.
- **Streamlit Demo:** Added the `app.py` file to provide an image captioning demo using the trained model.

Challenges & Solutions

This project is based on the [BLIP](#) and [SMILE](#) repositories. It fine-tunes an image captioning model using the Flickr8k dataset and provides a demo through Streamlit.

Challenges

Solutions

Now

Project Issues

Fix Project Issues

Successful Project Result

- Dependency conflicts
- Dataset mismatches
- Configuration, preprocessing, evaluation, and GPU environment inconsistencies

- Matched dependencies
- Custom COCO-style annotations compatible with Flickr8K
- Customized settings and training code for single GPU environments

- Successfully trained on Flickr8K dataset in a local computing environment

Prolonged Training Time

Optimize Training Time

95% Reduced Training Time

- Training took over 4 hours using the cloned project setup
- Reduced image size(384 -> 224)
- Increased workers(8 -> 16)
- Switched to smaller dataset(MSCOCO -> Flickr8K)

- Reduced training time to 12 minutes per epoch

Slow Model Loading for Demo

Optimize Model Loading Time

99% Reduced Model Loading Time

- Initial model loading without a server exceeded 10 minutes per client.
- Applied port forwarding and caching techniques

- Reduced initial model load time from 10 minutes to just a few seconds

2. Flickr8k Dataset Download and Fine-tuning Process

Limitations

This project is based on the [BLIP](#) and [SMILE](#) repositories. It fine-tunes an image captioning model using the Flickr8k dataset and provides a demo through Streamlit.

Text Quality

- Descriptions are richer compared to BLIP and Base Models, but long texts degrade in quality toward the end.

1. [Project Modifications](#)

2. [Flickr8k Dataset Download and Fine-tuning Process](#)

3. [Running the Demo with Streamlit](#)

Object and Dataset Limitations

1. Project Modifications

- Poor performance when handling two or more objects or non-Flickr8K images.
- Limited by Flickr8K dataset and insufficient annotations

The following changes were made from the [original Github repositories](#):

- **Dataset Support:** Replaced the COCO dataset with the **Flickr8k dataset**.
- **Configuration File Updates:** Added the `configs/caption_flickr8k.yaml` file for configurations tailored to the Flickr8k dataset.
- **Custom Data Loader:** Added the `data/flickr8k_dataset.py` file to handle the Flickr8k dataset.
- **Evaluation Function Modifications:** Adjusted evaluation methods for the Flickr8k dataset.
- **Fine-tuning Script Updates:** Modified the fine-tuning script to support fine-tuning with the Flickr8k dataset.
- **Streamlit Integration:** Integrated the fine-tuned model into the Streamlit application.

Demo Setup Constraints

- Unable to upload the model via Github or GLF.
- Relied on inefficient local port forwarding for demonstration.
- Future goal: Explore AWS Bedrock or similar services for better scalability.
